

김태용 : 접근성 맞춤 selectbox

접근성 맞춤 selectbox 기능을 찾다가 w3.org에서 줬던 js들을 좀 합침

import 하고 아래처럼 쓰면 됨

```
<div class="select-type04">
  <button aria-haspopup="listbox" aria-labelledby="select01-list select01-button" id="select01-button">데이터 많은 순</button>
  <ul id="select01-list_list" tabindex="-1" role="listbox" aria-labelledby="select01-list" class="hidden">
    <li id="select01-list_option01" role="option" aria-selected="true">데이터 많은 순</li>
    <li id="select01-list_option02" role="option">데이터 적은 순</li>
    <li id="select01-list_option03" role="option">높은 가격순</li>
    <li id="select01-list_option04" role="option">낮은 가격순</li>
    <li id="select01-list_option05" role="option">음성 많은순</li>
    <li id="select01-list_option06" role="option">음성 적은순</li>
  </ul>
</div>
```

```
const listBoxs = document.querySelectorAll(".select-type04");

if (listBoxs.length) {
  listBoxs.forEach((target) => {
    const aria = window.aria || {};

    const button = target.querySelector("button");
    const exListbox = new aria.Listbox(target.querySelector("ul"));
    const listBoxButton = new aria.ListboxButton(button, exListbox);
  });
}
```
